HIRE FOR HELP

Software Requirements Specification

A platform connecting people who need help with people ready to work

Group G-171
GLA University

1. Introduction

Hire for Help is a digital platform that connects customers who need everyday services, freelancers or part/full time workers, with people looking for job opportunities. It aims to make finding, booking, and managing work simpler and more accessible.

2. Objectives

- Help customers find suitable workers for their service needs.
- Give workers a place to showcase skills, experience, availability, and service areas.
- Make booking requests and job status easy to manage.
- Build trust through worker verification, reviews, and reporting tools.
- Support the platform through booking fees, commissions, and optional subscriptions or promotions.

3. Users

- Customer: searches for workers, requests services, manages bookings, and submits reviews.
- Worker: creates a profile, lists skills and availability, responds to booking requests, and tracks completed work.
- Administrator: reviews verification requests, manages user accounts and reports, and helps resolve booking disputes.

4. Main Features

4.1 Registration and Profiles

Users can register and maintain their profiles. Worker profiles include skills, experience, service area, availability, and relevant verification status.

4.2 Find and Select Workers

Customers can browse or search for workers by service category and location, and review available profile information before making a request.

4.3 Booking Management

Customers can submit a booking request with service details, location, and preferred time. Workers can accept or decline requests. Both parties can view booking status and relevant updates.

4.4 Payments and Promotions

The platform may support online payments, booking fees or commissions, refunds where applicable, and promotional discounts. Payment and settlement arrangements will follow the selected provider's supported process.

4.5 Reviews and Reports

Customers can review completed services. Users can report concerns, and administrators can review reports or disputes and take appropriate action.

4.6 Administration

Administrators can manage user accounts, review worker verification, monitor bookings, manage promotions, and handle reports or disputes.

5. Basic Workflow

1. A customer or worker registers on the platform.
2. Workers complete their profiles and submit required verification information.
3. Customers search for a suitable worker and submit a booking request.
4. The worker responds to the request and the booking status is updated.
5. The service is completed and payment is handled, where enabled.
6. The customer may submit a review or report an issue.

6. General Requirements

- The platform should be simple to use on mobile and desktop screens.
- Personal information and account access must be protected.
- Users should receive clear confirmation of important actions and booking-status changes.
- The system should prevent duplicate or inconsistent booking and payment records.
- Administrative actions should be restricted to authorized administrators.
- The platform should provide clear terms, privacy information, and a way to report problems.

7. Scope of the Initial Release

The initial release will focus on registration, customer and worker profiles, worker search, booking requests, booking-status tracking, basic administration, and essential trust and safety features. Payments, promotions, reviews, and dispute handling may be introduced according to project priorities and available time.

8. Items to Finalize

- The worker verification process and required documents.
- The booking cancellation, refund, and dispute policies.
- The payment provider and the platform's fee or commission rules.
- What subscriptions and promotional offers are included.
